

## Air Interface Adapter AIAD-8+-6G-190dB

MTS-No.: 27436

### Application

With the MTS AIAD you can emulate air interfaces for all imaginable scenarios. To avoid the influence from the live-net, the signals can be connected with cables directly from the different signal sources, as for example GSM or UMTS base stations or signal generators etc. over the MTS AIAD to mobile devices.

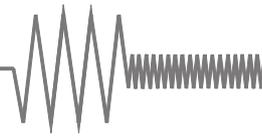

### Description

The Air Interface Adapter series AIAD is our most flexible solution for air interface emulation. With the AIAD it is possible to emulate the in- and outputs according to the demands of the customer. The design of the shown unit allows program controlled attenuation of each port at the same time. The function is carried out by dividers, attenuators and combiners. Additionally two sources are directly combined at the ports.

### Characteristics

- ▶ Ring system with 8 coupled in- outputs through 190 dB attenuators and 2 source connections per port (2x 8 ports)
- ▶ Frequency range from 500 MHz to 6000 MHz
- ▶ Attenuation range from 0 dB to 190 dB in 1 dB steps at each attenuator
- ▶ On Request attenuation in 0.5 dB steps (up to 95 dB) or in 0.25 dB steps (up to 64 dB)
- ▶ Switching time up to 10 ms
- ▶ Integrated power supply 100 V - 240 V AC
- ▶ Remote control by RS-232 and LAN (other interfaces on demand)
- ▶ On Request Device Web Control available
- ▶ 19" rack mount case with 6 HU
- ▶ Windows control programs can be offered
- ▶ High quality materials and components for extended durability
- ▶ On Request user blocking of separate components (with name / name and keyword available)
- ▶ Air Interface Adapters can be designed according to customers individual requirements
