

Shielding box MSB-05xx

Characteristics

- // Absolutely broadband usage for frequencies between 1.5 MHz and 8000 MHz
- // High RF shielding levels with more than 80 dB inclusive all interfaces
- // Simple handling thanks to easy close open function
- // Full absorber lining for application above 500 MHz
- // A wide range of supply and communication interfaces is available
- // Highest quality materials for extended life time
- // Shielding Boxes with other dimensions can be designed according to customers individual requirements

Application

The Shielding Box can be used for measurements and tests of electronic devices such as mobile phones, notebooks, evaluation boards etc. without electromagnetic disturbances from the environment. This leads to reproducible test results. Preliminary tests can also be carried out to save time-consuming and expensive tests in EMC laboratories.

Description

The stable stainless-steel construction of the MSB 05xx shielding box series is predestined for high test appearance. The operation of the test samples can be done by using the included communication interfaces. A reduction of standing waves is given by full absorber lining.
